Analyzing # 397 (Открыта): Variation of the parameters

Offsets of the ${}^3\text{He}$ telescope

01/13/2020 04:35 PM - Vratislav Chudoba

Status:	Открыта	Start date:	01/13/2020
Priority:	Нормальный	Due date:	
Assignee:	Ivan Muzalevsky	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:			

Description

Treat the data on thick target only and vary X and Y offsets of the ${}^3\text{He}$ detector system (consisting of 4 telescopes). We assume that the relative position of individual telescopes is fixed and corresponding to the drawing provided in [task 293](#).

The offsets (in mm) should be varied in the following way:

- (-4,0), (-3,0), ..., (3,0), (4,0);
- (0,-4), ..., (0,4);

Provide mean values for peaks (from each telescope) corresponding to the population of the ground state in the form of the table.

All other parameters should be the same as in the mother task.
